

## Chin Strap Whit 2 Support Points In Lariat ref. 21205

---

Chin strap made of non-elastic black polypropylene with two hooks that attach to the helmet. Due to its design characteristics, its use is ideal in construction industry, shipyards, oil and mining exploitation, tunnel construction, sawmills, industrial manufacturing, public service companies and in general where there is risk to lose the helmet.

- **Materials**

Made of 18 mm wide black polypropylene textile tape, which offers maximum durability, comfort, and soft contact with the skin, avoiding elongation or loss of functionality with its use. Hooks and adjustable tensors in nylon, and chin guard in polyethylene. It does not contain metal parts, so it does not alter the dielectric rating of the helmet.

- **Maintenance**

It is recommended to wash the chin strap periodically with cold or lukewarm water and neutral soap, to avoid accumulation of dirt and the appearance of fungi and bacteria.

- **Normative compliance**

Applicable Requirements of ANSI Z89.1 Standard
