

Fumigation Skullcap ref. 22102

Fumigation mask made of waterproof PVC ideal for fumigation work in greenhouses, spraying of agrochemicals in different crops, disinfection of stables, sheds, and floriculture work, allows the use of the respirator.

- **Materials**

Lens: Made of Petg, optically rectified, resistant to impact, penetration, and chemical stable. Easy exchange.

Skull Cap: Made of high-density polymer. This unites all the elements that make up the mask.

Head: Made of low-density polymer. It holds the mask on the worker's head, it has a ratchet adjustment system that allows it to fit to the user's size.

Hood: Made of waterproof PVC, highly resistant to tearing, electro-sealed, covers the head, neck, ears, and part of the back. Resistant to the action of pesticides

- **Maintenance**

Must be washed with cold water and detergent-free soaps, after each use, let it dry in the open air without direct exposure to the sun or use a cloth. Do not clean the visor dry or use petroleum derivatives such as gasoline or thinner to clean the mask at any case.

- **Normative compliance**

NTC 3610 "Headgear for welding and facial protectors".
