

Agricultural and Industrial Shin Guard ref. 28701

Element for agricultural use in cane cutting, reforestation, fruit harvesting, coffee, cereal mowing among others. It is an element to protect the leg in different industrial processes with falling risk and launch objects towards this part of the body, prevents possible cuts by contact with machines such as scythes, pruners or hand tools such as machetes, knives etc.

the design and front structure, offers protection for cut and impact on the shin and knee. the horizontal length completely covers, protecting the leg from biting snakes and other animals of the agricultural and tropical zone.

- **Materials**

The shin guard is made in flexible synthetic leather so that the user has comfort. Inside it has anti-cut protection with steel strap 5/8" wide by 0.8 mm thick. It has front parts (over instep and knee) of EVA of high density and 6 mm thick, which meet the protection against impact, but keep the piece light and comfortable.

- **Maintenance**

Is recommended to storage moisture free and not exposed to the sun to preserve the properties and resistance of its materials.
